THE READ

UBER rose 3.0% — about 1.4× a typical daily swing. Daily regime: Full Storm. Buyers lead on DI+ vs DI- (34.4 / 23.8 — clearly wider). Short-TF ADX near 54 while daily 14 and weekly 11 still below trend-confirmation zone. R3 at 80.83 aligns with +2σ (0.12% apart). RSI 61.7 is mid-band in range / revert (current) mode; MACD is above signal with histogram pressure building. Hurst 0.43 — mean-revert leaning, trends may not stick; ADX read: below 20 · trend not confirmed. On the index: SPY reads “Storm Warning” and about 65% of large-cap stocks were up; UBER reads “Full Storm” — different stress levels on the same day. This describes conditions at the snapshot — not a forecast of direction.

PLAYBOOK

- Continuation: hold 74.35 and accept above 77.75 toward 79.23 – 79.54 — buyers already lead on DI; wait for follow-through at the level.
- Range case: trade the 74.35–77.75 box until ADX confirms a breakout — inside the box, levels beat predictions.
- Trap: chasing intraday strength while daily ADX is still forming — confirmation needs the daily bar, not just the 15M spike.

Descriptive if/then scenarios only — not a buy or sell recommendation.

STRUCTURE

- R1 near 77.75 (Swing) — first hurdle above spot.
- S1 near 74.35 — first support if price slips; R2 / highs near 79.23 – 79.54.
- S2 near 66.74 – 67.22 if S1 fails.

PRICE MAP — WHAT TO WATCH ON THE CHART

Daily candles to the snapshot date. Chart overlays the nearest 3 supports and 3 resistances; the S/R section below lists up to 4 per side. Top strip lists those chart levels; Y-axis shows short tags only (R1, S1, $\pm\sigma$). Blue line = snapshot price.

DAILY Σ PRICE BAND

Typical one-day up/down range from 252 days of daily log returns — same formula as the live app.

-3 σ	-2 σ	-1 σ	SPOT	+1 σ	+2 σ	+3 σ
\$72.26	\$73.88	\$75.54	\$77.29	\$78.97	\$80.74	\$82.55
-6.5%	-4.4%	-2.3%	-	+2.2%	+4.5%	+6.8%

252-day historical daily vol at snapshot: $1\sigma \approx 2.22\%$ ($\pm \$1.68$ on this close). 252 trading days of daily log returns $\rightarrow \mu$ and $\sigma \rightarrow \text{spot} \times \exp(\mu \pm k\sigma)$. Same engine formula as Call for Action. Historical close-to-close vol — not ATR or options implied vol.

SUPPORT & RESISTANCE

Prices where the move has paused before. Resistance sits above price; support sits below.

REGIME — ALL TIMEFRAMES

The market “weather” on each timeframe — calm, expansion, fragile, or stressed. Timeframes can disagree.

15M Clear Skies CALM	1H Full Storm CRISIS	4H Full Storm CRISIS	1D Full Storm CRISIS	1W Storm Warning STRESS
-----------------------------------	-----------------------------------	-----------------------------------	-----------------------------------	--------------------------------------

TREND & CONTROL

Whether a real trend exists, and who is in control (buyers or sellers), on each timeframe.

15M random walk ADX 53.6 · buyers leading	1H random walk ADX 36.8 · buyers leading	4H no trend ADX 17.4 · buyers leading	1D no trend ADX 13.6 · buyers leading	1W no trend ADX 10.6 · buyers leading
--	---	--	--	--

TREND PERSISTENCE (1D)

Whether the daily move is likely to continue (trend) or fade (mean-revert), and which side is in control.

SIGNAL	VALUE	READ
Hurst	0.43	Mean revert · moves may fade
DI+ / DI-	34.4 / 23.8	Buyers leading (DI+ higher)
ADX	13.6	Below 20 · trend not confirmed

MOMENTUM (1D)

Short-term speed of the move. RSI flags stretched conditions; MACD shows momentum building or fading.

SIGNAL	VALUE	READ
RSI(14)	61.7	Neutral · adaptive 30/70 band
MACD	0.26	Above signal · momentum firm
Signal / Hist	-0.39 / 0.65	Buying pressure widening

MOVING AVERAGES (1D)

Where price sits versus its 50-, 100-, and 200-day averages. Above = longer-term strength; below = weakness.

MA	PRICE	VS SPOT
SMA 50	71.87	Above +7.5%
SMA 100	72.90	Above +6.0%
SMA 200	77.95	Below -0.8%

OB 60

OS 20

Daily structure: range → adaptive oversold/overbought at 30/70 (not fixed 70/30). RSI 61.7 reads neutral. With weak/no trend (or mean-revert Hurst), stretched RSI means more — classic range logic fits better.
